Global FX & Macro Market Intelligence

Independent FX market commentary | Market-data snapshot: 12 November 2026 | Research prototype

Executive market brief

The supplied one-year market snapshot shows divergence across major currencies rather than a uniform US dollar move. EUR/USD fell 4.56% and USD/JPY rose 3.63%, while GBP/USD rose 0.64% and USD/CNY fell 6.43%. US 10-year Treasury yields increased from 4.065% to 5.097% (+103.2 basis points). Gold front-month futures declined 7.90%. These are observed market changes, not evidence of causation.

Market dashboard

Instrument	Latest	5 sessions	21 sessions	Full sample
EURUSD	1.1059	-1.56%	-1.29%	-4.56%
GBPUSD	1.3237	-1.78%	-0.16%	+0.64%
Gold futures	3,880.7000	-5.66%	-5.53%	-7.90%
US 10Y yield	5.0970	+5.38%	-1.79%	+25.39%
USDCNY	6.6616	-0.17%	-0.45%	-6.43%
USDJPY	159.6670	+0.83%	+0.85%	+3.63%

Note: for US10Y_YIELD, percentage-change columns represent relative changes in the yield level, not basis-point moves. For interpretation, use basis points: latest minus prior yield, multiplied by 100. The instruments have differing trading calendars; 5/21 sessions are not identical calendar windows.

Cross-asset interpretation

Foreign exchange: EUR/USD weakness and USD/JPY strength are consistent with a stronger dollar against the euro and yen over the sample, but GBP/USD and USD/CNY moved in the opposite direction. Currency-specific drivers require independent news and policy verification before attributing causes.

Rates: the US 10-year yield rose 103.2 bp over the sample. Higher long-end yields can change hedging costs and currency valuation assumptions, but this series alone does not establish the monetary-policy cause or predict the next FX move.

Gold: front-month futures declined from approximately $4,213.60 to $3,880.70 per troy ounce. Futures prices are not spot bullion prices; contract rolls and carry may affect comparison.

Client decision framework

USD receivables / EUR functional currency

Model EUR/USD downside, base and upside scenarios; compare unhedged exposure with staged forwards and options subject to approved treasury policy.

JPY payables / USD functional currency

Stress-test USD/JPY reversal and continuation; review hedge ratios, maturity matching, and counterparty exposure.

CNY exposure

Monitor onshore/offshore quote conventions and liquidity. The supplied USD/CNY series is indicative; obtain executable quotes before trading.

Scenario analysis (illustrative, not forecasts)

Scenario	EUR/USD	USD/JPY	Potential client response
USD strength	-3%	+3%	Review import costs and hedge coverage
Range-bound	0%	0%	Maintain policy hedge ratios
USD reversal	+3%	-3%	Review downside protections

Risks, controls and limitations

- All market observations are from the user-supplied Yahoo Finance export, not independently verified live exchange quotes.
- The data establish movements, not why they occurred; no unverified central-bank statements or economic releases are asserted.
- USD/JPY and USD/CNY are local-currency units per US dollar; EUR/USD and GBP/USD are US dollars per foreign currency. Directional interpretation must respect quotation conventions.
- Gold is front-month futures, not spot. US10Y_YIELD is a yield level expressed in percent; interpret changes in basis points.
- Market data may be delayed, adjusted or revised. This is educational research and not investment advice or an executable trading recommendation.

Data provenance and reproducibility
